FOR IMMEDIATE RELEASE

BOSCH SELECTS MIRTEC AS ITS EXCLUSIVE AOI PARTNER FOR THE NEXT FIVE YEARS

MARCH 2013 — MIRTEC, the Global Leader in Inspection Technology, announces that it has been chosen as the exclusive AOI partner for Bosch for the next five years. The agreement was signed on 20th March 2013. As part of the multi-million dollar agreement, Bosch gave MIRTEC an exclusive supplier contract for multiple MV-9 2D/3D AOI systems.

"We are very pleased to enter this new partnership with MIRTEC in the field of automated optical inspection. The combination of 2D/3D technology will help us to further develop our high-quality standards for the future. With MIRTEC, we have a strong and dedicated partner who shares many of our values and understandings," said Dr. Markus Jung, Ph.D., Corporate Lead Buyer for machinery and equipment of the Bosch Group.

MIRTEC was selected from a large number of competitors from around the globe. The evaluation process was exceedingly detailed and included a full company audit for all of MIRTEC's procedures. In the end, MIRTEC's technology, philosophy and business practices were those selected by Bosch.

Both companies provide customers with the highest quality products and services at competitive pricing and recognize that customers are the source of future growth. As a result, both strive for strong, reliable and long-term partnerships based on trust and respect.

"This is a great honor for MIRTEC because we recognize, the same as the industry does, that Bosch is one of the most thorough of customers when looking for the latest technologies. As a premier manufacturer with the highest standard, their requirement was to get best inspection technology for their demand, supported by a truly global infrastructure and excellent company procedures," said MIRTEC Europe President David Bennett.

The all new MV-9 2D/3D In-Line AOI system is configured with MIRTEC's revolutionary OMNI-VISION® 2D/3D Inspection Technology that combines MIRTEC's exclusive 15 Mega Pixel 2D ISIS Vision System with a proprietary 3D Digital Multi-Frequency Moiré System to provide precision inspection of SMT devices on finished PCB assemblies. MIRTEC's technologically advanced Six Phase Lighting System uses multi-color LEDs to illuminate inspection areas from six different angles providing superior solder joint characterization and coplanarity inspection of leads on gull-wing devices. Additionally, MIRTEC's revolutionary Digital Multi Frequency Quad Moiré Technology, provides true 3D inspection of SMT devices on finished PCB assemblies using a total
